

We have learned that not everyone is able to open our search facility. If that is the case, it is probably because you are using some generic PDF reader. This will open the PDF files adequately, but is not sufficient for the search.

Only **Adobe** Acrobat Reader is sure to activate the so-called PDX file which runs the search index. Your problem should therefore be solved by downloading the latest version of that for free.

You can do this by going to <https://get.adobe.com/uk/reader/otherversions/> .

There are versions available for Windows, Mac and Android. Watch out for any optional extra offers which may be given. Unless you actually want them, they can be avoided by ensuring the 'No thanks' box is ticked.
